(a)
midpoint mass, $\varepsilon = 10^{-5}$
exact endpoint, B=1
exact endpoint, B=2
CFM (main), B=1
CFM (main), B=2
$\Pr(|X_{1-\varepsilon}| < 0.05)$
w/w_c
(b)
threshold implied by tie slopes
CFM (main)
exact field
$\hat{w}_c(t)/w_c$ (B=1)
$1-t$
(c)
(d)
terminal-gap sensitivity, $B = 1$
1e−5
exact, $w = 0.9w_c$
exact, $w = 1.1w_c$
exact, $w = 2w_c$
learned, $w = 0.9w_c$
learned, $w = 1.1w_c$
learned, $w = 2w_c$
$\Pr(|X_{1-\varepsilon}| < 0.05)$
terminal gap ε
